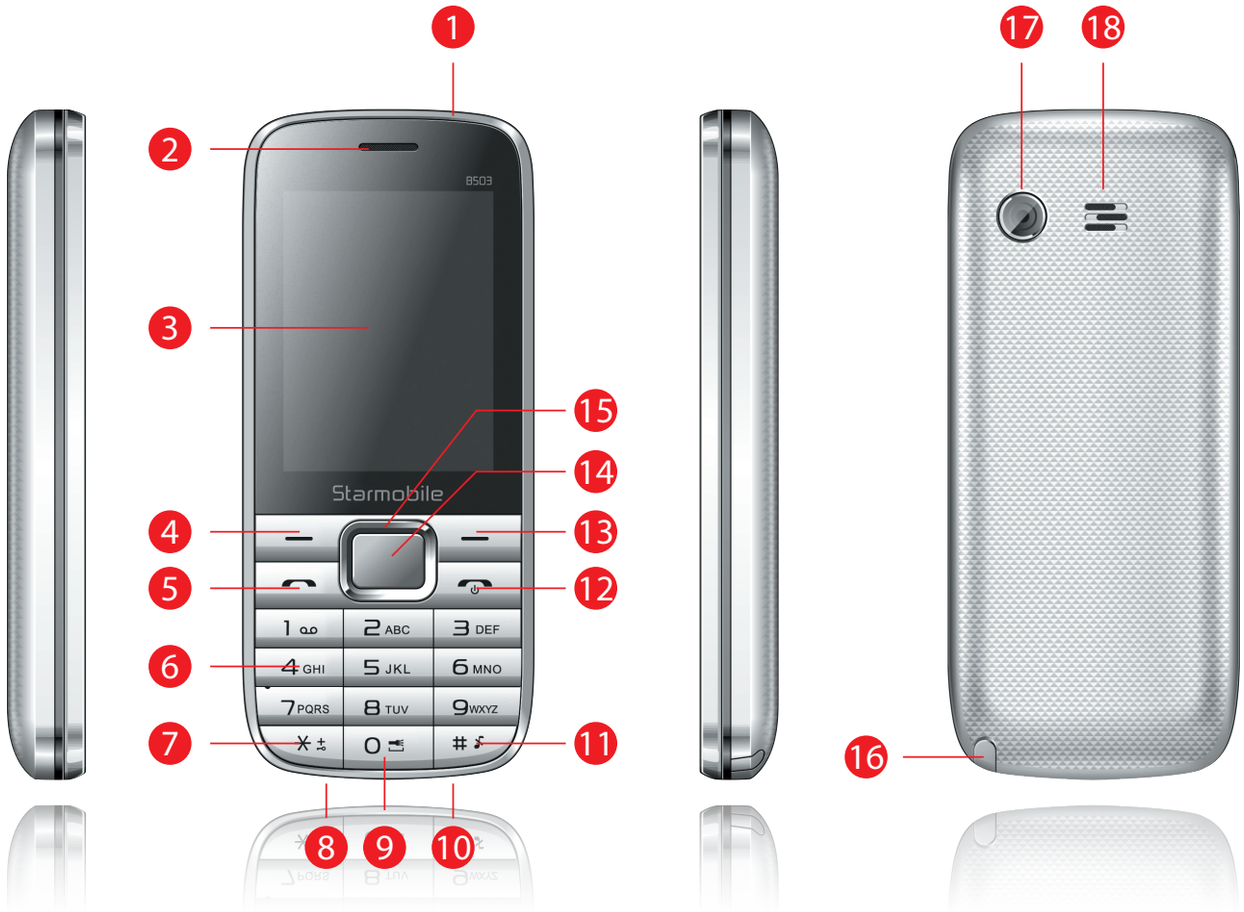
1 Overview

Your Phone

The following is a diagram of your mobile phone. There may be variances to the actual product.



1 Torch/Flaslight Bulb
2 Earpiece
3 Screen
4 Left Soft Key (LSK)
5 SIM1/SIM2 Calling Key
6 Number Keys
7 * Key
8 Headset Jack
9 Torch/Flashlight Key
10 Charger/USB Jack
11 Profile Toggle Key
12 Ending Key
13 Right Soft Key (RSK)
14 Confirm Key
15 Navigation Keys
16 Antenna
17 Camera Lens
18 Speaker

Key Functions

Press	To
Call key	• Make a call from SIM1/SIM2 card • Answer an incoming call • View call logs in standby mode
Ending key	• Press and hold the key for about three seconds to switch on/off the phone • End or reject an incoming call • On standby mode sleep
Left soft key	• Select the highlighted item • Access Message in standby mode
Right soft key	• Access Phonebook Names in standby mode • Return to the previous menu
Confirm key	• Confirm a selection • Access main menu in standby mode
Direction keys	• Access Camera (↑), Mobile TV (↓), Shortcuts (←), and Write Message (→) while in standby mode • Increase (↑) or decrease (↓) the volume during a call
Number keys	• Enter numbers, letters, and characters • Call the voice mail center in standby mode. You can do this by pressing and holding the **1** key for about three seconds • Select a submenu item labeled with the corresponding number.

*** key**	• Display the symbol list in any input mode. *In standby mode, press the key once to enter* *******, *twice to enter* **+**, *three times to Enter* **P**, *and four times to enter* **W**.
# key	• Enter #. • Activate or deactivate Vibrate/Silent mode by pressing the key and holding for about 3 seconds. • Change input modes when editing text.

Screen Icons

Icon	Indicates

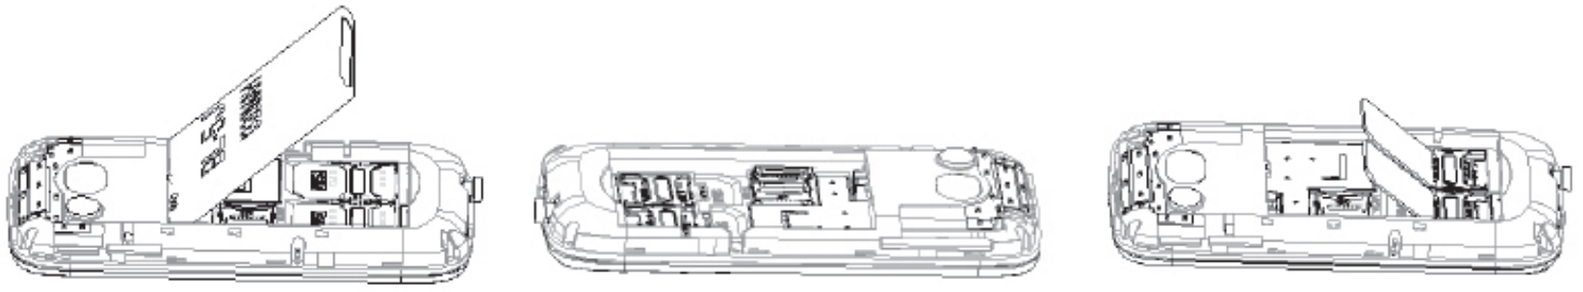
	MP3 music is playing in the background
	Alarm is activated
	Locked keypad
	Battery power level
	Headset is in use
	General profile is activated
	Outdoor profile is activated
	Silent profile is activated
	Missed call(s)

2 Getting Started

Installing the Battery and SIM Cards

Your mobile phone allows use of two separate SIM cards at the same time. To install, slide in the SIM card with its gold chip facing downward. Make sure the beveled edge of the SIM card is properly aligned with the card slot. Once the SIM card is in place, put in the battery and replace the cover.



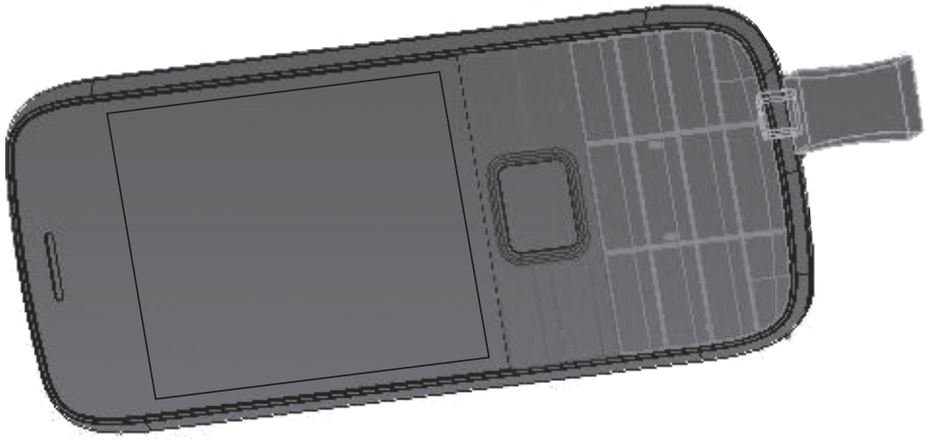
Installing a Micro SD Card

Your mobile phone supports Micro SD cards with up to 16GB of memory. When installing a Micro SD card, ensure that its gold chip is facing downward, and that its beveled edge is properly aligned with the card slot.

The standard mobile phone package from Starmobile does not include a Micro SD card. Micro SD cards must be purchased separately by the user.

Charging the Battery

To charge your mobile phone's battery, connect the charger to a power socket, then connect the other end of the charger to your mobile phone's power jack.



Phone Lock

The phone lock protects your mobile phone from unauthorized use. This function is disabled on default mobile phone settings. The default phone lock code–**1122**–can be changed to any numeric string in the range of four to eight digits.

Always remember your phone lock code. If you cannot recall your lock code, contact Starmobile's service center for assistance on unlocking your phone and resetting your lock code.

PIN and PUK

The personal identification number (PIN) protects your SIM card from unauthorized use. The PIN unblocking key (PUK), meanwhile, unlocks a blocked PIN. Both PIN and

PUK are provided with your SIM card. The default SIM card code is **1234**. For more details and assistance, contact your network provider.

Entering the wrong PIN three consecutive times will prompt your phone to ask you for the PUK.

Locking the Keypad

Press the **Left soft key** then the *** key** in standby mode to lock the keypad.

Press the **Left soft key** then the *** key** to unlock the keypad.

If the **Auto Keypad Lock** function is enabled and the phone is idle for a pre-set period in standby mode, the keypad will lock automatically.

3 Contacts

The Starmobile Neptune B503 has two storage options for contacts: SIM card and phone. Maximum capacity for phone storage is 500 entries. Storage capacity on your SIM card depends on the SIM card type hissued by your network provider.

To add a new entry in your Contacts, key in the phone number while in idle screen and press **Options** to save. Choose your preferred storage location for the contact, then edit other contact details through the edit interface that appears.

4 Message

You can compose text, view received messages, and edit related message settings for your mobile phone.

5 Multimedia

Mobile TV

Your Neptune B503 allows you to watch analog TV on your mobile phone for free through the use of local wireless TV signals. Pull the antenna out when watching TV programs from your phone to ensure optimal TV reception.

Camera

Your mobile phone comes with a built-in camera at the back, which allows image and video capture. Pictures are saved in the file system of the phone or Micro SD card. Images are saved in *.jpg format. You can send pictures from your phone using the Bluetooth function.

Image Viewer

Image viewer provides the following options for image files saved on the Micro SD card: View, Image information, Browse style, Rename and Delete.

Video Player

Video player provides the following options for all videos saved on the Micro SD card: **Play**, **Rename** and **Delete**.

Audio Player

You can select **Multimedia** > **Music player** to launch the music player in standby mode. Press the **Left soft key** to view the music list or change related settings.

Sound Recorder

Your mobile phone supports WAV recording formats. You can record conversations, which will be saved to the Audio folder under File Manager.

FM Radio

The Neptune B503 comes with a built-in FM Radio. You can listen to FM radio stations and add them to your channel list.

To listen to FM radio:
1. Connect the headset to your mobile phone.
2. On the main menu screen, select **FM radio** to launch the radio application.

While listening to the radio, you can do the following:

Press the **Left soft key** to view or edit the channel list, manually set a frequency, automatically search for and save channels, configure relevant settings, and record the audio clip, among others.

6 Internet

You can access WAP sites and use WAP-based services on your phone. To access WAP sites through your phone, you will first need to subscribe to this service from your network provider and set the relevant parameters on your phone.

The Neptune B503 comes auto-profiled or pre-configured with network WAP settings. For details about accessing WAP sites and their corresponding charges, get in touch with your network provider.

7 Warnings and Precautions

This section contains important information pertaining to correct and safe usage of your mobile phone. Read carefully before using your device.

Electronic Device
Switch off your Neptune B503 in places that prohibit mobile phone use. Do not use your mobile phone when it can cause danger or interference with electronic devices.

Medical Device
- Power off your device and follow the rules and regulations set by hospitals and health care facilities.
- Manufacturers recommend a minimum distance of 15 cm from the pacemaker to prevent mobile phones from potentially causing interferences with the pacemaker. If you are using a pacemaker, use the device on the opposite side of

the pacemaker and do not carry the device in your front pocket.
- Some mobile phones have been found to affect the performance of hearing aids. For such issues, please consult your network provider.

Potentially Explosive Atmospheres

Comply with all signs and instructions. Power off your mobile phones in areas that are potentially explosive, or where you would normally be advised to switch off your vehicle's engine. Using your mobile phone in such areas can trigger sparks, which could cause an explosion or fire, resulting in bodily injuries or even death.

Do not switch on your mobile phone at refueling points such as service stations. Comply with restrictions on the use of radio equipment in fuel depots, storage, and distribution areas, and chemical plants. You must adhere to restrictions in areas where blasting operations are in progress.

Before using your mobile phone, watch out for potentially explosive areas that are often, though not always, clearly marked. Such areas include below-deck on boats, chemical transfer or storage facilities, and areas where the air contains chemicals, grain, dust, or metal powders. Ask the manufacturers of vehicles using liquefied petroleum gas (such as propane or butane) if mobile phones can be safely used in their vicinity.

Traffic Security

Observe local laws and regulations while using your mobile phone. If you are using your mobile phone while driving a vehicle, please comply with the following guidelines:
- Concentrate on driving. Your first responsibility is to drive safely.
- Do not talk on your mobile phone while driving. Use hands-free accessories.

- Park your vehicle at the side of the road before making or answering a call.
- RF signals may affect electronic systems of some motor vehicles. For more information on this, consult your vehicle manufacturer.
- Do not place your mobile phone over the air bag or in the air bag deployment area. You may be injured by the device, owing to the strong force of its trajectory when the air bag inflates.
- Do not use your mobile phone while inside an aircraft. Switch off the device before boarding. Using wireless devices in an aircraft may be dangerous to the operation of the aircraft, disrupt pilot-ground communications, and may be considered illegal.

Operating Environment

- Do not use or charge your mobile phone in dusty, damp or dirty places, or areas with magnetic fields. Otherwise, the circuit may not function properly.
- Your mobile phone complies with RF specifications when used near your ear or at a distance of 1.5 cm from your body. Keep your mobile phone 1.5 cm away from your body to meet the aforementioned requirement. Ensure that accessories such as your mobile phone case or holster are not composed of metal components.
- Avoid using your mobile phone when charging in the middle of a storm to prevent possible dangers caused by lightning.
- Avoid touching the antenna while on a call. Touching the antenna affects call quality and increases power consumption. In effect, talk time and standby time are reduced considerably.
- Observe the local laws and regulations while using your mobile phone. Respect others' privacy and legal rights.
- Use accessories authorized by Starmobile. Using unauthorized accessories with your mobile phone will render the warranty null and void.
- Keep the ambient temperature between 0°C and 40°C during mobile phone

charging. Keep the ambient temperature between 0°C to 40°C when using your mobile phone running on battery power.

Preventing Hearing Damage

Using the receiver, earbuds, headphones, speakerphone or earpieces at high volume can result in permanent hearing loss. Be extremely careful when listening at high decibel levels. Set the volume to a safe level. If you experience strange ringing sounds in your ears or if you hear muffled speech, get your hearing checked immediately. If you continue to use high volume, your hearing will soon get affected.

Hearing experts offer the following suggestions to protect your hearing:

- Reduce the time you use the receiver, earbuds, headphones, speakerphone, or earpieces at high volume.
- Do not increase the volume to block noisy surroundings.
- Reduce the volume if you can no longer hear people speaking near you.

Safety of Children

Please comply with precautions concerning children's safety. Letting a child play with your mobile phone and/or its accessories, which may include parts that can be detached from the device, may present a choking hazard and prove to be dangerous. Keep your mobile phone and its accessories out of reach of small children.

Environment Protection

Adhere to local regulations regarding safe disposal of mobile phones and its electrical accessories including chargers, headsets and batteries. Recycle them. Do not dispose of an exhausted battery or a mobile phone as common domestic rubbish.

Accessories

Use only the standard accessories (charger, battery, and headset) provided with your mobile phone. Using accessories of other manufacturers or vendors with this mobile phone may invalidate any approval or warranty applicable to the device. It may result in non-operation of the mobile phone, and may ultimately prove dangerous.

Battery and Charger

- The battery can be charged and discharged hundreds of times before it eventually wears out. When the standby time and talk time run shorter than normal, it is advisable to replace the battery.
- Use the AC power supply defined in the specifications of the charger. An improper power voltage may cause fire or the charger to malfunction.
- If the ambient temperature is considerably low or high, the capacity and life of the battery will be reduced. Using your mobile phone in temperatures lower than 0°C will affect battery performance.
- Do not connect two poles of the battery with conductors such as metal materials, keys or jewelries. Otherwise, the battery may short-circuit and cause injuries and burns on your body.
- Do not disassemble the battery or solder battery poles. This may lead to electrolyte leakage, overheating, fire, or an explosion.
- In the event of a battery electrolyte leak, make sure that the electrolyte does not touch your skin and eyes. If electrolyte comes into contact with your skin or eyes, immediately wash with clean water and consult a doctor.
- Common signs of battery wear and/or damage includes color change, and abnormal heat during storage or charging. If this happens, remove the battery from your mobile phone immediately and stop using it. Continuing to use damaged batteries may lead to battery leakage, overheating, explosion or fire.
- If the power cable is damaged (e.g. the lead is exposed or broken), or if the

plug is loose, stop using the cable at once. Otherwise, it may lead to electric shock, short-circuiting of the charger, or a fire.
- Do not dispose of batteries in fire as they may explode. Damaged batteries may also explode.

Cleaning and Maintenance

- Your mobile phone, battery, and charger are not water-resistant and must be kept dry at all times. Protect your mobile phone and its components from water or vapor. Touching the device with wet hands may lead to short-circuiting or device malfunction, and electric shock to the user.
- Do not place your mobile phone, battery, or charger in places where it can get damaged due to collision. This may lead to battery leakage, device malfunction, overheating, fire, or explosion.
- Do not place magnetic storage media such as magnetic cards and floppy disks near your mobile phone. Radiation from your mobile phone may erase the information on the storage media.
- Do not leave your mobile phone, battery, or charger in extremely hot or cold places. Doing so results in equipment malfunction and may lead to a fire or an explosion.
- Do not place sharp metal objects such as pins near the earpiece. These objects may fall into the earpiece and hurt you when you are using your mobile phone.
- When cleaning your mobile phone, you must first power the device off and disconnect it from the charger.
- Do not use detergent, powder, or other chemical agents such as alcohol and benzene to clean your mobile phone and charger. Otherwise, parts of your mobile phone may get damaged, or cause a fire. It is best to use a damp and soft antistatic cloth for cleaning your mobile phone and charger.
- Do not dismantle the device or accessories. Otherwise, Starmobile will not

be liable to pay for damages as the device and accessories are not covered by warranty.

Emergency Call

Your mobile phone provisions for emergency calls when in the coverage of your network service area. The connection, however, cannot be guaranteed in all conditions. You should not rely solely on your mobile phone for essential communications.
